Establishing Standards for a Shared Digital Vision: Webinar Sessions

Capabilities for a local ecosystem of services and data.	• What are the 'capabilities' that a local public service organisation could use to collaborate with local and national partners? • What are the standard interfaces that create a market for those capabilities?	Monday 4th July from 14:00

Identity	• Of
	  o People
	  o Business
	  o Employees
	• Which local services require the identity assurance of digital participants?
	• What data can be shared based on a common Trust Framework
		Monday 11th July from 14:00

An API Framework for local public services.	• How do we build a catalogue of APIs with a consistent style? • What components could be standardized so that APIs can be developed in parallel by many projects? • How do we govern who is using what API for what purpose?	Wednesday 27th July from 14:00

Access to real-time data	• Digital Transformation will be about real-time access to real-time data, rather than downloading large snapshots.
	• What protocols should we be using? APIs, SPARQL, oDATA, openRegisters?
	• Data is shared as one of …
	  o open data
	  o with the consent of the subject
	  o relying on a legal gateway
	… are there a common standards and infrastructure for each of these?
		TBC

Common Data Model	• At the heart of collaboration is the need to interrogate and understand each other's data. • We have candidates from BSI, Health, Open Data, etc.	TBC
Design and Governance	• How would a 'place' collaborate to make digital design decisions? • How is quality assured so that each organisation can rely on shared capabilities?	TBC
