

Establishing Standards for a Shared Digital Vision: Webinar Sessions

Capabilities for a local ecosystem of services and data.	<ul style="list-style-type: none"> • What are the ‘capabilities’ that a local public service organisation could use to collaborate with local and national partners? • What are the standard interfaces that create a market for those capabilities? 	Monday 4 th July from 14:00
Identity	<ul style="list-style-type: none"> • Of <ul style="list-style-type: none"> ○ People ○ Business ○ Employees • Which local services require the identity assurance of digital participants? • What data can be shared based on a common Trust Framework 	Monday 11 th July from 14:00
An API Framework for local public services.	<ul style="list-style-type: none"> • How do we build a catalogue of APIs with a consistent style? • What components could be standardized so that APIs can be developed in parallel by many projects? • How do we govern who is using what API for what purpose? 	TBC
Access to real-time data	<ul style="list-style-type: none"> • Digital Transformation will be about real-time access to real-time data, rather than downloading large snapshots. • What protocols should we be using? APIs, SPARQL, oDATA, openRegisters? • Data is shared as one of ... <ul style="list-style-type: none"> ○ open data ○ with the consent of the subject ○ relying on a legal gateway ... are there a common standards and infrastructure for each of these? 	TBC
Common Data Model	<ul style="list-style-type: none"> • At the heart of collaboration is the need to interrogate and understand each other’s data. • We have candidates from BSI, Health, Open Data, etc. 	TBC
Design and Governance	<ul style="list-style-type: none"> • How would a ‘place’ collaborate to make digital design decisions? • How is quality assured so that each organisation can rely on shared capabilities? 	TBC
